COMPANY OVERVIEW

Shop.py is a B2B SaaS analytics platform helping companies track and improve how their products appear in AI-generated shopping recommendations — a new discipline known as Generative Engine Optimization (GEO). As AI assistants increasingly replace traditional search engines, product discovery has fundamentally shifted. If a brand is not surfaced in an AI response, it may never be seen by the customer. Shop.py gives companies the tools to measure, understand, and act on their visibility in this new landscape.

PLATFORM

The Shop.py browser extension platform consists of three integrated components:

GEO Dashboard	Enterprise analytics portal tracking product visibility, AI ranking position, and competitive benchmarking across multiple AI platforms.
ShopSmart Extension	A free consumer browser extension that enhances AI shopping with coupon codes, aggregated product reviews, and popular video content from TikTok and Instagram while capturing anonymized, real-world AI shopping behavior. Data collected from the ShopSmart extension powers the GEO analytics platform, enabling companies to measure and improve their visibility in AI-generated shopping recommendations. This anonymized behavioral data is aggregated and analyzed to generate GEO insights that companies purchase through the Shop.py analytics dashboard.
Ethics Monitoring	Detects inaccurate product information generated by AI systems and alerts companies so they can correct upstream data sources.

PROBLEM

Businesses today lack visibility into how their products are discovered by AI. Specifically, companies cannot:

- Determine whether their products appear in AI-generated recommendations
- Measure how they rank against competitors in AI responses
- Identify when AI systems are presenting incorrect or outdated product information

This transparency gap makes it increasingly difficult for brands to compete in the rapidly growing AI-powered commerce landscape.

SOLUTION

Shop.py bridges this gap by combining real consumer behavior data collected through the ShopSmart extension with enterprise-grade GEO analytics. Companies gain actionable insights to improve both how their products are discovered and how they are represented across AI shopping environments. This anonymized behavioral data is aggregated and analyzed to generate GEO insights that companies purchase through the Shop.py analytics dashboard. Companies subscribe to the platform to access aggregated GEO insights derived from real AI shopping behavior from the ShopSmart extension.

FINANCIAL OVERVIEW

$2.5M	$1.5M	$5M	$15M
Funding Sought	Year 1 ARR	Year 2 ARR	Year 3 ARR

Shop.py is seeking $2.5 million in initial funding to support product development, infrastructure build-out, and market entry. Revenue is generated through a usage-based pricing model, where enterprise clients subscribe to the platform and pay based on usage of GEO analytics and data insights.

NEXT STEPS & MILESTONES

Phase 1 (Year 1)	Launch ShopSmart extension and GEO analytics infrastructure. Onboard pilot clients and scale extension to 50,000 users. Secure 15–20 enterprise customers to purchase the Shop.py analytics.
Phase 2 (Years 2–3)	Expand into additional industries. Grow to 100+ enterprise clients as AI-driven commerce continues to scale.
